An Empathy Map Canvas is a collaborative, visual tool used by product, design, and development teams to gain deeper insights into their users or personas. It helps teams move past simple demographics to truly understand user behaviors, pain points, and motivations.
Below is an overview of how an Empathy Map Canvas works, followed by an example implementation using ServiceNow Client Scripts and UI Policies to build and manage a digital Empathy Map Canvas form.

An Empathy Map Canvas breaks down a user's experience into sections surrounding their core perspective:
